Checkmate in One Move

Checkmate in Two Moves

Checkmate in Three Moves

Winning Material

Different chess pieces have different long-term values. The combined value of a player's pieces is called that player's *material*. Chess players often use the following numbers to evaluate how much material each player has.

- **Pawn** **1**
- **Knight** **3**
- **Bishop** **3**
- **Rook** **5**
- **Queen** **9**

(The king isn't given a value since he can't be traded, but his fighting value is similar to a knight or bishop.) These values aren't part of the rules and you can't win a game just by "having more points." Rather, these values can help you to figure out when you have an advantage and to decide when to trade pieces.

In the following problems you are asked to find a move that "wins material." This can mean taking an unguarded piece, but it can also mean trading a less valuable piece for a more valuable one.

In this position, for example, White can win material with the move 1.Bxf8. This is only a trade of pieces after 1...Kxf8, but White has gained a rook (worth about 5 pawns) for a bishop (worth about 3), meaning that he has gained about 2 pawns worth of material.
